- Acquired in-depth understanding of 2G, 3G, and 4G technologies, and their applications in mobile communication.
- Explored the technologies and infrastructure behind telephone and mobile communication systems.
- Developed a comprehensive understanding of telecommunication mediums used by BSNL for its vast range of services.

PROJECTS

MINI PROJECT : INVENTORY MANAGEMENT SYSTEM

ROLE: FRONT-END DEVELOPER

- Led a 3-member team in designing and implementing a user-friendly interface for a College Store Inventory Management System.
- Utilized PHP, HTML, CSS, and JavaScript to enable efficient data entry and retrieval, aiming to streamline record-keeping, enhance accuracy, and reduce operational time by eliminating manual processes and optimizing manpower usage.
- Leveraged Apache server for hosting the application, ensuring smooth functionality and accessibility.
- Future implementation planned for the college store to showcase the project's practicality and potential impact on store operations.

TECH STACK:

- PHP, HTML, CSS, JavaScript
- Apache server

SIMON GAME

- Developed a captivating Simon Game using HTML, CSS, and JavaScript, prioritizing an interactive and user-friendly design.
- Employed JavaScript to implement dynamic front-end features, optimizing functionality and ensuring a seamless gaming experience.
- Demonstrated strong front-end development skills with HTML, CSS, and JavaScript, showcasing adaptability and proficiency in creating engaging user interfaces.

TECH STACK:

- HTML, CSS, JavaScript, jQuery
